

Quivira 4.1

Private Use Area

The Private Use Area consists of 6,400 Codepoints which will never be assigned to any characters in the Unicode Standard. They are meant to be used for own characters in individual fonts.

The character names used in this documents are own inventions and not standardised in any way. The regular names of these characters according to Unicode are “PRIVATE USE CHARACTER-” followed by the codepoint of each character, i.e. they range from “PRIVATE USE CHARACTER-E000” to “PRIVATE USE CHARACTER-F8FF”. Accordingly, the blocks and their names are also self-invented. These names always start with “Private Use Area:” to make sure that they can never collide with a real Unicode block.

The assignments are mostly stable, but characters may occasionally be removed from the Private Use Area if they are defined in an official Unicode block. In this case they are marked as undefined in this document, with a reference to the new codepoint.

Characters written in red are new in Quivira 4.1.

For a complete overview of all characters in Quivira see [Quivira.pdf](#); for meanings and usage of characters in other blocks see <http://www.unicode.org>.

These characters represent pieces used in variants of chess, namely Xiangqi (Chinese chess), Janggi (Korean chess), Shatranj, Tamerlane Chess and Japanese Shogi. All characters are western-styled to match those in the Miscellaneous Symbols block, although variants using ideographs are more common in East Asia. See <http://www.chessvariants.com> for details.

Each Combining Subscript digit fits exactly under a superscript digit. The Combining Subscripts may be used for chemical symbols, e.g. $\text{}^1\text{H}$ or $\text{}^{238}_{92}\text{U}$, or for mathematical purposes. If you can achieve this by using markup, then markup is the preferred way.

The ellipses are meant to create international vehicle registration codes by composing them. Use the left and right halves to write two-letter codes, e.g. ⒶⒷ for Brasil, the thirds for three-letter codes, e.g. ⒶⒷⒸ for Singapore, and the empty left and right thirds with a middle letter to create a one-letter code, e.g. Ⓐ for Thailand. They can also be used for language codes, e.g. in multilingual manuals.
